DNA panels contain 2µg DNA per sample, normalized to 100ng/µl, from unrelated individuals.

* These populations include parent-offspring trios. Child DNA samples are not included in the panels but are available as individual samples.

§ Panels include all unrelated 1000 Genomes samples.

‡Panels include all 1000 Genomes and HapMap samples, and some of the HapMap 3 samples.

All panels MGP00001-MGP00025 are currently available for order through the NHGRI Sample Repository web catalog.

For more information about DNA and Cell lines available on these and other populations, visit the NHGRI Sample Repository web catalog:
